

Preparation of diaminodiarylmethanes

Abstract

- 5 A process is described for preparing diaminodiarylmethanes comprising the steps
- a) reacting an aromatic amine with a methylene-donating agent in the presence of homogeneous acid catalysts,
 - 10 b) removing the homogeneous acid catalyst from the reaction product,
 - c) working up and purifying the reaction product,
- 15 which comprises removing the homogeneous acid catalyst from the reaction mixture by adsorption to a solid adsorbent.
